

Product Cleaning Guide

Here are some hints, tips and recommendations for the cleaning of electro plugs and insertables that have electro sockets for the connections. It is not advised to get these sockets wet as this could damage the products so we thought we'd show you how we do it.

STEP 1:

- Clean the plug or probe in the normal way to remove any lube etc.
- The following steps are aimed at removing harmful bacteria such as E.coli, etc

STEP 3: Here's how:

- first, place the chopsticks on top of jug as shown

STEP 2: Here are the basic ingredients:

- water based antibacterial / anti viral cleaning agent (such as [Dettol](#) or [Dettol](#))
- a jug or similar deep enough to immerse the plug or probe.
- A trusty pair of [chopsticks](#)

STEP 4: Here's how:

- Place the plug on the chopsticks (or similar)

STEP 5: Here's how:

- Pour in the Dettol

STEP 6: Here's how:

- Fill to the required level and leave overnight
